

Deploying remote handling heritage - from fusion to decommissioning projects (and back again)

Simon Delavalle, VNS UK Ltd

Heritage of Veolia Nuclear Solutions UK

Oxford Technologies Ltd was founded by engineers who created the world's first fully **remote handling** campaign inside a Tokamak: 'Boom technology' deployed at UKAEA JET.

2000

UKAEA JET: remote handling group

2008

Support on future programmes at JET & ITER

2013

Strategic move into new markets:
decommissioning & waste management solutions

Kurion joined Veolia

2017

VEOLIA
Nuclear Solutions
launched

In July 2017 Veolia brought all of its nuclear technologies together into one business and launched Nuclear Solutions.

Remote handling for the fusion industry

NUCLEAR SOLUTIONS

ITER Projects and Experience

Port Plug Handling

Cask Transfer System

In Vessel Viewing System

Neutral Beam RH

Multi Purpose Deployer

RH Interface Diagnostic

ITER Projects and Experience

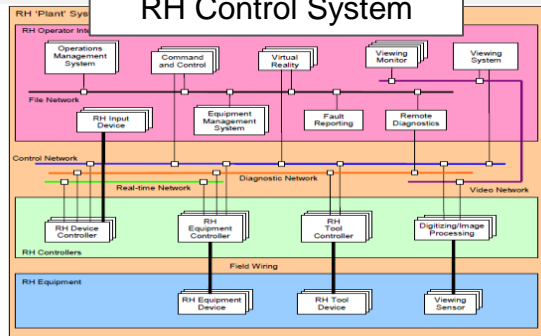

RH Hot Cell Concepts

Control Room Layout

RH Control System

RH Code of Practice

Exporting expertise to the wider industry

NUCLEAR SOLUTIONS

Learning from

Fusion to Industry

Dexter™ : Force Feedback Remote Manipulator for use in high radiation environments

8 km

Fusion to Industry

Long reach boom for Fukushima reactor investigation and fuel debris retrieval

- High radiation environment
- No man access to machine location
- Complex and delicate reconfiguration required

TECHNOLOGY and EXPERTISE
transfer from nuclear fusion
remote handling experience

Fusion to Industry

21m reach
18 axis of motion

Bespoke control system

- Controlling up to 18 robot axis
- Digital twin system for complex operations

Bespoke actuator

- High torque
- Radiation resistance
- Harsh environment

Design for high radiation

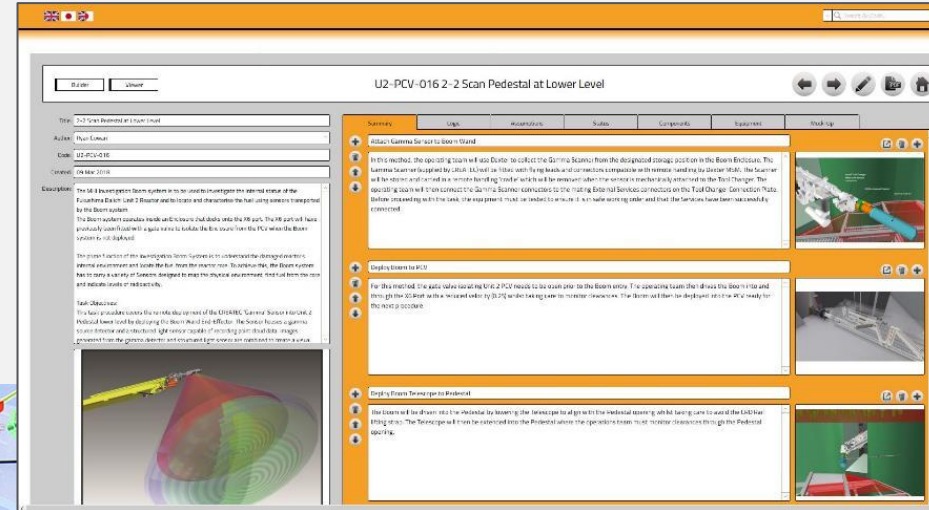

- 1MGy gamma radiation

Fusion to Industry...

Digital tools to support RH system design and operation

- Real interfaces driving virtual system
- Task study
- Task optimisation
- Operator training

... and from the industry back to Fusion!

VNS continuously develops its technologies to adapt to the most demanding challenges in the nuclear industry – from high radiation resistance to delicate remote handling operations.

These technologies and know-how can now be redeployed for existing and future fusion enterprises.
