

NUCLEAR MANIFESTO

SCOTLAND NEEDS NUCLEAR.

Nuclear energy has a home in Scotland. For generations, Scottish nuclear workers have kept homes in Scotland warm and light. For decades, the nuclear power stations they have run have saved more carbon than any other source in Scottish history. For 65 years, nuclear has provided good, secure jobs for our people to build lives and families on a firm foundation and a bedrock of Scottish industry.

That proud contribution should not be consigned to history. It should be renewed for the next generation and generations to come. Alongside renewables, nuclear can propel us to a secure, sustainable and prosperous future.

That is why new nuclear should return to Scotland, and that is why in Parliament, I will support:

1

Drop the new nuclear planning ban

2

Help Scottish companies win work on English and Welsh nuclear projects

3

Include new nuclear development in the Energy Skills Passport and invest in training for Scottish workers

The nuclear reactors we build today will last for the rest of this century. They will provide our country with long-term security and opportunity that will last for our children and grandchildren and generations yet to come, and the time to act is now.
